Disclaimer

Some stains/tests used in arriving at the diagnosis may have been performed using reagents that have not been cleared or approved by the US Food and Drug Administration. The FDA has determined that such clearance or approval is not necessary. These stains/tests are used for clinical purposes and should not be regarded as investigational or for research. They were developed and their performance characteristics determined by this laboratory. This laboratory is certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA-88) as qualified to perform high complexity clinical laboratory testing. All reference laboratories utilized are certified as CLIA laboratories with test development in their laboratory.

Immunohistochemical stains and/or special stains are performed on formalin-fixed paraffin embedded tissue sections, B+ fixed paraffin embedded sections, and/or frozen sections. Positive or negative immunoreactivity is based on subjective or objective evaluation of staining using established criteria. Appropriate positive tissue control(s) are used for each antibody and are stained adequately. Unless otherwise indicated in the report, all resulted immunostains are single antibodies. Each antibody and special stain is appropriately validated and approved by the CLIA Laboratory Director.
